PHP Full Stack Developer (2 positions)

We are looking for web developers skilled in modern PHP (PSR-2, DI, PDO, Templates, TDD) to be part of our team. We believe in working in small teams, where everyone has a strong sense of commitment and ownership.

Intangible Benefits:

- You'll be working at one of the most popular startups in Latin America.

- You'll be promoting remote and independent work.

- You'll be working alongside the founders and high-caliber colleagues.

- Startup flexibility, with experienced entrepreneurs.

Working in our Team:

- Agile methodology.

- Small team: you will be largely responsible for the success of the company.

- Great decision-making authority when designing the architecture to solve the problem.

- A flexible schedule, which does not mean you work less, quite the contrary.

- Extremely interesting work, in contact with new technologies.

Tangible Benefits :)

- Professional and enjoyable work environment. We have a barbecue grill on the balcony for weekly "asados"!

- Our goal is to learn, everybody learns here.

- Competitive wage, based on your experience.

- 4 week vacation per year. Yes, we want people to work at their 100%, but we don't want them to get burn out.

- Our offices are located in the vibrant Palermo neighbourhood.

- Full access to the gym and pool in the building.

- Free snacks and beverages at the office (and you'll be able to add items to our grocery list).

- Complete schedule flexibility. We all work from home on Wednesdays.

Required Skills:

- Willingness to keep learning every day.

- Proficiency with modern PHP: Composer, Dependency Injection, PHPUnit, PHP-FIG PSRs.

- Experience working in (and enjoying) projects in which unit testing is crucial.

- Experience with a full stack framework (Symfony, Laravel, etc.).

- Experience with Doctrine or another ORM.

- Knowledge of Software Architecture (Patterns, DDD, etc.).

- Experience using source version control (Git, SVN, etc.).

Knowing one or more of the following technologies is a plus:

- Knowledge of deployment tools, such as Fabric.

- Knowledge of cloud platforms, such as AWS or Google Cloud Platform.

- Experience with Elastic Search.

- Experience with Redis.

- Experience with job queues, such as Beanstalkd, Rabbitmq.

Given the job description, we are not sure there is anyone 100% ready for it, but it is part of our culture to tackle problems you don't know much about. We are looking for individuals who are not afraid to get their hands dirty to find good solutions to problems knowing that the best solution is not always possible considering the value for money equation.
